HLA PRE-OP RECIPIENT

Orderable - HLA Pre-op Recipient

**Turnaround Time:** 1-3 days
**STAT:** Same day if blood is received in the laboratory before 0900

**Specimen:**
6 mL Red top Vacutainer tube - No additives or separator gel

**Collection Information:**
Draw pre-dialysis (if applicable) and by venipuncture to avoid contamination with anticoagulants.
Drawn upon pre-op admission to LHSC in preparation for transplant

**Reference Ranges:**
cPRAs: 0-100% (HLA Antibody Testing)
DSA detected or not detected

**Interpretive Comments:**
Anti-HLA antibodies indicate sensitization to potential organ donors and some blood products.
Antibodies directed against donor HLA antigens may predict a risk of rejection

**Comments:**
Pre-op patients that are being prepared for transplant at LHSC (Kidney, Kidney/Pancreas, Pancreas, Liver/Kidney, or Heart) should have this test ordered.
Liver patients: see “HLA Pre-op Liver”
The sample may be used for cPRA, crossmatching, DSA testing or it may be stored for future testing as outlined in the current program-specific policies.
**Critical Information Required:**

Indicate if the patient is undergoing therapy with products or medication containing therapeutic antibodies such as Rituxan, Campath, Eculizumab, IVIG, OKT3, ALG, etc. as these may interfere with the results.

Indicate if the patient has had any sensitizing events such as blood transfusions, previous transplants, pregnancies etc. as these could influence the interpretation of the results.

Also indicate if the patient is undergoing a change in immunosuppression regime or is being treated by plasma exchange since these actions may explain fluctuations in results.

**Storage and Shipment:**

Samples drawn at LHSC are delivered to the Transplant Laboratory at room temperature.

Pre-op serum samples will be stored in the laboratory, should further testing be required.
