<tbody>
<tr>
<td>2.7 mL Blue (3.2% Sodium Citrate) top Vacutainer</td>
<td>1.8 mL Blue (3.2% Sodium Citrate)</td>
</tr>
<tr>
<td></td>
<td>*In cases where access is difficult, a 0.9 mL Blue top tube is acceptable</td>
</tr>
</tbody>
</table>

Reference Ranges:

See Interpretive Comments on report

Interpretive Comments:

Caution:

D-Dimer: when used in patients with a low clinical probability of DVT or PE, a value of ≥500 µg/L FEU (previously reported in DDU) is considered positive. In overt DIC, values over 3000 µg/L are common. A D-Dimer result should never be used in isolation for the diagnosis of DVT or PE and must be interpreted in combination with the clinical probability.

Comments:

Inpatient D-Dimer requests will not be performed routinely. These requests must be authorized by a Hematologist.

During regular working hours 0900-1700 contact Dr. M. Kovacs (pager 15182). After 1700 contact the on-call Hematologist (pager 12222).

All other D-Dimer requests will be processed including Emergency departments, Outpatient Clinics, private Physician's Office and referring Institutions.
**Storage and Shipment:**

Blue (Sodium Citrate) top specimens are kept at 18-24° Celsius.

Blue (Sodium Citrate) top specimens should be centrifuged and tested within 4 hours from the time of specimen collection.

Samples are discarded after 24 hours.
