

Immunizations

Recipients should not receive any vaccinations for 6 months following transplantation. Patients should never be immunized with vaccines prepared from live sources.

After 6 months, transplant patients may be given:

- Diphtheria
- Pertussis
- Tetanus
- Influenza
- Hepatitis A (Twinrix)
- Hepatitis B (Twinrix)
- Flu shot (influenza vaccine)

Recipients should **NEVER** be given:

- Mumps
- Measles
- Smallpox
- Rubella
- Polio (Sabin form)
- B.C.G.
