

**Date:** July 17, 2017

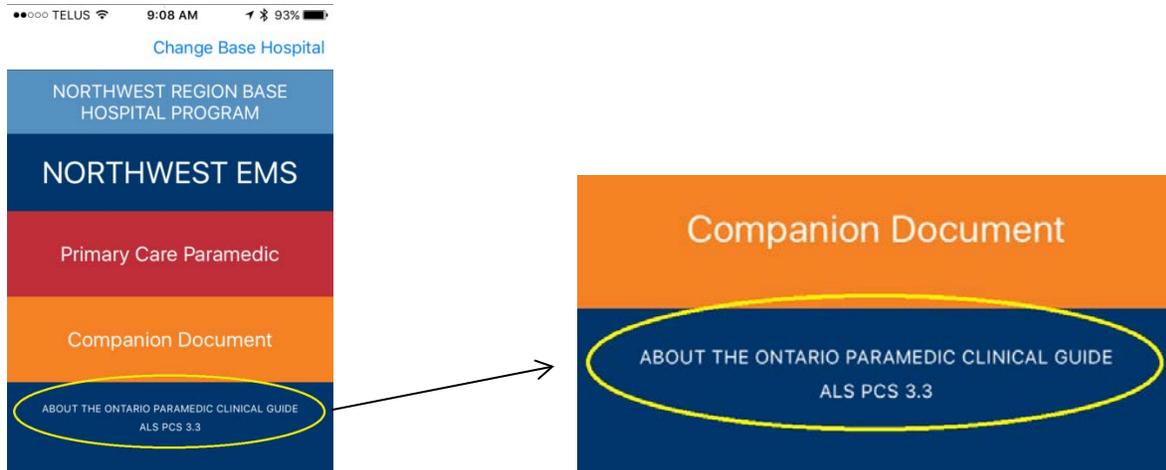

**To:** Ontario Paramedics and Paramedic Service Operators

**From:** Ontario Base Hospital Group (OBHG)

**Re:** OPCG App version update to ALS PCS 4.3 / Survey Feedback

As of July 17, 2017 the ALS PCS Version 4.3 has come into effect. In preparation for this release, The OBHG App Working Group has been working diligently to update the App content to reflect these changes. The App has been updated to the ALS PCS Version 4.3. In order to receive this update you **MUST** be connected to wifi or data. The current set up within the App requires connection to the database via data.

To confirm your update, please make sure your version states “ALS PCS 4.3 July 17, 2017” at the bottom of your Service Main Menu.

**Thank you for your feedback.** The OBHG received over 500 responses from the App survey sent to all Ontario Paramedics in May 2017. Based on the feedback provided, the OBHG has been working towards additional content and upgrades to the OPCG App. Our first priority and current work project is to make the App downloadable to negate the need to connect to “data” to populate content. We expect this feature to be released in the coming weeks. As well, there will be work done to provide users a search feature and additional notes section. We want to continue to hear from our App users! Please provide feedback and / or ask your questions through our website at:
